Color Key
0.3
0.5
0.7
Value
cellular protein modification process
monosaccharide metabolic process
protein dephosphorylation
proteolysis
glucose metabolic process
chromatin organization
enzyme inhibitor activity
cellular ion homeostasis
transcription corepressor activity
microtubule cytoskeleton organization
generation of a signal involved in cell–cell signaling
ameboidal cell migration
response to hypoxia
circulatory system process
mitochondrial envelope
mitochondrion
nucleolus
protein kinase activity
ubiquitin–dependent protein catabolic process
structural molecule activity
nucleotide binding
RNA binding
nuclear division
ovarian follicle development
negative regulation of protein phosphorylation
